

**Instructional Material - Justification Due Date: October 28, 2016**

**DEPARTMENT: Anthropology**

Please include answers to the 5 questions below (along with the itemized list of the items you want to purchase, and the cost):

1. What will the money be used for? (i.e., software, videos, etc.) Please see attached for allowable items.

The money will be used for instructional materials such as new DVD's of ethnographies and materials for Anth 1L . We do not have any current ethnographies and would also would like to acquire a few classics.

There were maps in L-24, which were taken off when the building was renovated some five years ago but the maps were never recovered. When referring to various cultural groups across the world, maps help in locating and relating to them. We are requesting maps in L-24 and MLC 102.

The mounted projector and DVD/VHS player has long been on the replacement list. None of the DVD's we play in the room are clear or bright. We are also requesting cameras for student to use as a recording tool during fieldwork and a printer and scanner for students to develop exhibits.

2. How many students will benefit from this purchase?

We have over 4000 students enrolled in Anthropology program through out the year and each section has 50 students. These materials will benefit each of the students enrolled in our classes.

3. How does this enhance your Equity Goals?

Using different teaching methodologies addresses the learning needs of our diverse student body. Experimental materials, visual materials, (DVD's and maps) will give many of our visual and experiential learners a fair chance to succeed. Many of our students do not have access to a printer and scanner. When they are collecting data and developing a poster for display, a camera, printer/scanner will reduce the digital divide some of our students face.

4. How does this enhance your Student Learning Outcomes?

In anthropology program our goal is to equip the students with an "anthropological thinking" and the skills they can use in a globalized world irrespective of their major. Visual and hands on instructional materials will give them an opportunity to understand the methods, develop the skills and apply them. Viewing ethnographies will provide fieldwork experience, which they can apply during the quarter and through their lives. Lab materials, cameras and printer will help students go beyond data gathering and into analyzing, interpreting, and developing knowledge.

**5. Was this noted on your Program Review?**

The list has been turned in during each program review and hopefully it will be satisfied this year.
